

DRONESAR

SEARCH AND RESCUE

Browser Feature List

Live Mode

Drone Select	See what drones are active and choose which one to display on the browser
Drone Log	View the drone parameters as the drone flies. Altitude, speed, Latitude, Longitude, etc
Pilot Chat	Text chat with the online pilots. See who is responding based on their pilot name, as they have entered in the app
2 Way Audio	Activate the 2-way audio channel to allow a continual voice chat with the online drone pilots.
2D Mode	See the drone live position from above in 2D
3D Mode	See the drone live position in 3D mode. Drag the camera view around the drone to the desired position.
Sat / Map Mode	Choose between satellite image map overlay or without.
Send Mission	Create a waypoint mission using the DroneSAR browser. Drop each point on the map using the create mission tool. When finished send the mission to the pilots.
Cam Up/Cam Down	Use the browser to control the drone camera of the selected drone. Watch as the camera view changes to the browser requested position.
Hover	Press the hover button on the browser and make the selected drone maintain its position.

Archive Mode

Select mission	Scroll through the list of completed missions and choose a mission that you wish to review.
Play Mission	Use the play button to reactivate the flown mission. Watch the recorded streamed video and the drone position at the time of recording.
Account Details	Manage DroneSAR account details such as active subscriptions, drone ID's, payment details and personal preferences.
